CitraFiber®

is a

Premium

All-natural

Citrus Peel

Ingredient

CitraFiber® provides the food and beverage industry with a superior functional citrus fiber powder derived only from upcycled citrus peel. CitraFiber® improves functionality and delivers structure in baked goods. CitraFiber® enhances moisture retention, and adds nutritional value when used as a replacement for non-natural fibers and gums.

CitraFiber® is all-natural, 100% peel with nothing added, making it the best choice for totally clean-labelled finished goods. Our patented process removes the oils and sugars, while substantially increasing fiber to 96%. The total pectin content is the best in the industry at 46%+! CitraFiber® comes in a fine powder, available in #60 mesh or #100 mesh powders.

CitraFiber® is extremely hydrophilic, naturally providing superior moisture retention in a variety of food applications. It also has great lipophilic properties which make it an excellent natural emulsifier upon hydration. With less than 1 carb per serving, colorless and odorless CitraFiber® is suitable for Keto-friendly and gluten-free applications, including:

- Baked goods [muffins, brownies, cookies]
- Plant-based meat products
- Plant-based dairy [milks, yogurts, ice creams]
- Sauces and marinades

CitraFiber® is the perfect replacement for starches, gums, carrageenan, pectin, allergens, hydrogenated fats, phosphates, emulsifiers and chemical stabilizers – in all your formulations!

In comparison to similar ingredients, CitraFiber® is derived only from citrus peel – with no pulp or rag. It delivers a superior benefit profile and enables manufacturers to fulfill consumer demands for totally clean label, all-natural, sustainable ingredients for all food and bakery applications, including Keto and gluten-free foods.
